

The Design Cycle

Every website you build follows these 4 stages — and you'll often loop back.

INQUIRE & ANALYZE

Understand the problem and your audience.

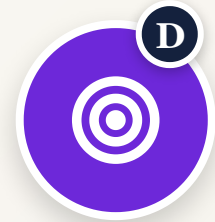

DEVELOP IDEAS

Plan your solution — specs, wireframes, site maps.

CREATE THE SOLUTION

Build it — write the code, follow your plan.

EVALUATE

Test, get feedback, reflect, improve.

 *Evaluate often sends you back to Develop Ideas or Create — that's normal, not failure.*
